

Building on the Cornerstone Before and After Pictures

These pages show before and after comparisons of some of the renovated areas. The Cornerstone Project made the outdoor campus:

- 1) Safer – by replacing broken or cracked bricks and walkways, and removing dense shrubbery that was used as hiding places
- 2) Easier to maintain – by replacing tall trees and shrubs that were difficult to trim, and installing an irrigation system
- 3) More attractive – by having new walkways, plants, and lighting and a cleaner look.
The plants and grass should soon exhibit more color due to growth and springtime

The professional design is intended to give our outdoor campus an attractive, clean, more up-to-date look that will be inviting to the community and help the church thrive in our mission for years to come.
